CH2M HILL Engineering Internships - Houston, TX

Job Code: RN24200 Engineering Intern 4

Title: SWOB - Engineering Intern - Houston, TX

Description and Desired Qualifications: Our Houston office is seeking an intern for the Summer of 2012. The selected candidate will assist engineers with a variety of tasks in industrial water, wastewater and environmental projects. For example, water and wastewater assignments may include environmental assessments, cost estimation and information tracking in spreadsheets, treatment facility design using AutoCAD, assisting with document and plan preparation, utility asset management, and project management support.

You should be a self-motivated professional in your junior year, or higher, in college and pursuing a Chemical, Civil, or Environmental Engineering major from an accredited university with an interest in environmental engineering work for the industrial water/wastewater industry. Advanced working knowledge of Microsoft Office, Word, Excel, Access and PowerPoint is preferred. Excellent oral and written communication, decision-making, problem resolution, and a sense of initiative are important for this position. You should have a team-oriented attitude as well as a desire to grow personally as well as professionally with this internship opportunity.

You should have a team-oriented attitude as well as a desire to grow personally as well as professionally with this internship opportunity.

The challenge? Helping save and protect the one and only Earth we have. Our **Environmental Intern** jobs are your opportunity to help restore environmentally impaired sites for economic use. Each day, you will assist Project Managers on research, data management, and technical report writing for challenging environmental projects. You should be a self-motivated, team-focused individual who is currently enrolled in an environmental or civil degree program and have a desire to grow personally as well as professionally with each environmental intern job.

Our **Environmental Interns**:

- Share work experiences in a positive work environment where talents are valued
- Invest in meaningful endeavors, both assigned and voluntary, that are part of building a better world
- Contribute to a company dedicated to sustainable development practices
- Work on environmental consulting activities which may include contaminated site assessment and remediation projects, ecological and natural resource and sediment damage assessments, strategic environmental management and permitting services, environmental liability management services, ordnance and explosives management services, remedial design, treatment systems for hazardous and toxic waste contaminated properties, and sustainable development planning and design services
- Build upon knowledge gained through coursework
- Apply knowledge of Word and Excel to data management and technical report writing

Basic Qualifications:

- Student who has completed their Sophomore year in an Engineering Program from an accredited undergraduate program
- Preferred Field of Study: Chemical, Civil, Environmental, or Biological related
- Able to travel to client sites in Houston area as needed
- Advanced working knowledge of Microsoft Office

Degree Required: High School or GED
